

DESCRIPTION

“Tobia is an example of how simplicity can have character. The lightness of a sign that becomes object, almost like a child’s drawing that outlines a body and a form to narrate a function. I’ve been intending to do this project for a long time” (Ferruccio Laviani). In the floor version, Tobia is a portable luminator that projects powerful light upward. Slender, compact, easy to move, this lamp finds a place in any space: a concentrate of possibilities, packed into a simple sign. Flexibility and functional quality are the strong points of Tobia. The central node is not just a graphic gesture, but also an invitation to grip: the lamp becomes nomadic. A high performance light point, where colour underscores or attenuates its presence. In the wall version Tobia is available with and without cable, in five different colours. A special element allows easy fixing to the wall. Light is emitted upwards and downwards from the two extremities of the lamp.

MATERIALS

Liquid varnished or gold painted metal and aluminum

COLORS

Gold, White, Black, Orange, Yellow

CERTIFICATIONS

FERRUCCIO LAVIANI

An architect and designer, Ferruccio Laviani works with companies in both the furniture and the fashion industry, for whom beyond designing products, he also takes care of corporate identity and designs show-rooms across the world.

He is also in charge of artistic direction, communication, setting up exhibitions and events, always with a highly contemporary and recognisable style. He made his début in the world of lighting by designing the Orbital sculpture-lamp for Foscarini, an authentic icon of Italian design, together with his wall lamp version, Bit. The term sculpture-lamp can also be used to describe Supernova, a three-dimensional volume created with two-dimensional surfaces, Dolmen, a piece with a strong symbolic value, and Tuareg, a technological installation inspired by nature.
